

Assessment Analysis Guide
25-26 Math G2 Form L Length Measurement
Mathematics
Grade 2

Reference #: 6851a34

1

Item Id: i185612

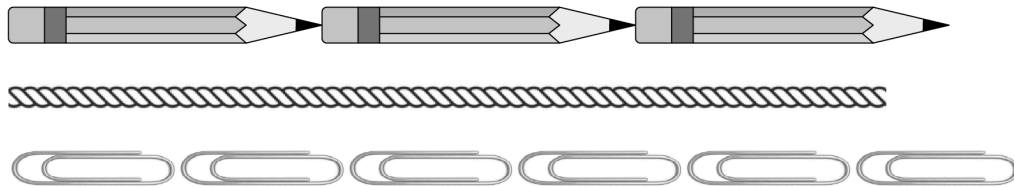

Item Type: SR (Selected Response)

Standards Description:

2.MD.A.2 Measure the length of an object twice, using length units of different lengths for the two measurements; describe how the two measurements relate to the size of the unit chosen.

Content:

Maizie measures the length of the **same** piece of string using pencils and paperclips.

Which statement is true?

- A It takes fewer pencils to measure the piece of string because the pencils are larger than the paperclips.
- B It takes more pencils to measure the piece of string because the pencils are larger than the paperclips.
- C It takes the same number of pencils and paperclips to measure the piece of string because she is measuring the same object.

Primary Standard: 2.MD.A.2

Points Possible: 1

Distractor Rationale:

- | | | |
|----|---|---|
| A: | It takes fewer pencils to measure the piece of string because the pencils are larger than the paperclips. | Correct. |
| B: | It takes more pencils to measure the piece of string because the pencils are larger than the paperclips. | Student correctly identified the smaller of the two given units, but confused the connection between size and number of units needed. |
| C: | It takes the same number of pencils and paperclips to measure the piece of string because she is measuring the same object. | Student did not understand how the size of the measuring unit impacts the number of units needed to make the measurement. |

2

Item Id: i184953

Item Type: SR (Selected Response)

Standards Description:

2.MD.A.1 Measure the length of an object by selecting and using appropriate tools such as rulers, yardsticks, meter sticks, and measuring tapes.

Content:

Which unit would be the **best** unit for measuring the length of a book?

A

yards

B

meters

C

centimeters

Primary Standard: 2.MD.A.1**Points Possible:** 1**Distractor Rationale:**

A: yards

Student chose a unit that is too large for the object's length, perhaps thought it was a smaller unit of measurement.

B: meters

Student chose a unit that is too large for the object's length, perhaps thought it was a similar unit with a smaller scale.

C: centimeters

Correct.

3

Item Id: i184959

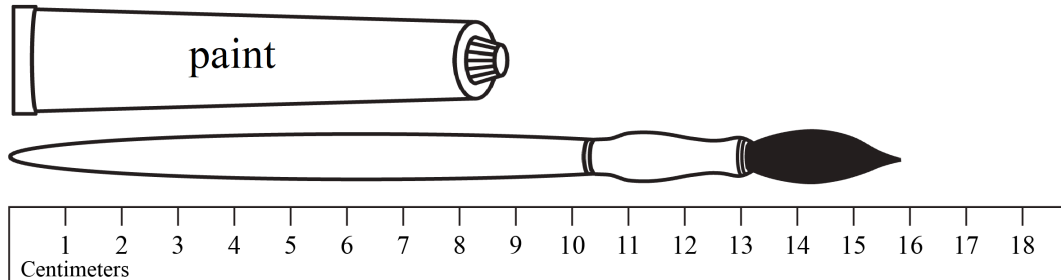

Item Type: SR (Selected Response)

Standards Description:

2.MD.A.4 Measure to determine how much longer one object is than another, expressing the length difference in terms of a standard length unit.

Content:

Use the ruler in the picture to answer the question below.

How many centimeters **longer** is the paintbrush than the tube of paint?

A 7

B 16

C 25

Primary Standard: 2.MD.A.4

Points Possible: 1

Distractor Rationale:

A: 7

B: 16

C: 25

Correct.

Student identified the length of one object but did not compare it to the other measurement.

Student added the lengths of the two objects instead of subtracting.

4

Item Id: i184954**Item Type:** SR (Selected Response)**Standards Description:**

2.MD.A.1 Measure the length of an object by selecting and using appropriate tools such as rulers, yardsticks, meter sticks, and measuring tapes.

Content:

Sam is measuring a toy house.

What is the length of the toy house, in centimeters?

A 20

B 21

C 24

Primary Standard: 2.MD.A.1

Points Possible: 1

Distractor Rationale:

A: 20

B: 21

C: 24

Correct.

Student counted the number of marked intervals instead of measuring the total length based on unit divisions.

Student chose the number on the ruler aligned to the end of the object being measured and did not account for the measurement not starting at zero.
